5.5 Milestone 2: Main Construction Sprint, Initial Deployment

- Write up better user stories (optional)
- Update your product backlog and prioritize your backlog based on meeting with the client (optional - bonus)
- Write all your test cases and JUnit for each TDD
- Continue gathering feature coverage and documenting them, including Planning, Design, Refactoring
- Write your Sprint Planning notes for all sprints

2

• Write Sprint Demo notes including how done stories

• Keep updating your Checklist board for task management

• Continue using GitLab for the rest of the project

• Implement features that you have planned for sprint 2 and 3

• Make sure tests for your main business flow all your Task Acceptance tests and integration tests

• Add Automated E2E and Continuous Integration using CI/CD (last priority bonus)

• Deploy your application to AWS

• Review a timeline of GitLab with Release Notes

Now that our VET allows tasks are another requirement for Milestone 2 task will be next to determine grade that for milestone, specific expectations for each grade are shared in the table on Canvas

same im gonna head off, gotta do some other things, fb msg if need

WK 9/17 5:45 PM
okay

WK 9/17 6:21 PM
Jamaine George what changes did you and steven make to the booking api?

```
import axios from "axios";  
  
export default axios.create({  
  baseURL: "http://localhost:8080/api/booking",  
  headers: {  
    "Content-type": "application/json"  
  }  
});
```

is this still the api url?

Meeting ended: 4h

JG 9/17 6:30 PM
yeah it is

EACH team member must submit and demonstrate a set of Unit Tests (either front end or back end tests), a total of 4 tests (NOT 4 JUnit classes, it can be 1 class and a min of 4 tests) --- there will be a Submission Link to submit the unit testing code (just the standalone code / class is fine, it doesn't have to run). You will also demo the unit tests in this week's labs (they don't have to PASS but they do have to execute successfully).
