Software Engineering: Process and Tools Sprint Planning Notes
Team: Group1 Friday 10:30

Sprint: Sprint 2
Date: 22/09/20

Attended: All
Scrum Master: Wen Koay
Product Owner: Homy
Development team: Jonathon Mitterbacher, Jonathan Haddad, Jamaine George, Steven Hoang

1. Things That Went Well

GEORGE, Jamaine (s3660962) : The timely communication between the team and Homy made the frontend/backend linking process less frustrating.

HADDAD, Jonathan James (s3722092) : Converting my HTML page into a React.js component and linking it to a new pathway was relatively straightforward.

MITTERBACHER, Jonathon Bailey (s3784464) : As a team, we communicated frequently and effectively with each other and Homy.

HOANG, Steven (s3600563) : We communicated regularly in order to keep up with each other tasks and motivated Jamaine to finish our tasks

KOAY, Wen Shen (s3658845) : Team communicated well, and was very punctual to all meetings set , team also was very committed to assigned tasks.

2. Things That Could Have Gone Better

GEORGE, Jamaine (s3660962) : The booking functions could've been implemented faster if the team had more experience with React.js.

HADDAD, Jonathan James (s3722092) : When I was initially attempting to deploy the app to AWS I encountered a lot of errors.

MITTERBACHER, Jonathon Bailey (s3784464) : We could've used clearer Git branch names so that there is less overlap between different branches.

HOANG, Steven (s3600563) : Tasks could have been allocated better so that the workload was spread equally.

KOAY, Wen Shen (s3658845) : Backend and Front end linking , this was due to our inexperience.

3. Things That Surprised Us

GEORGE, Jamaine (s3660962) : How difficult it was to update the database from Frontend functions.

HADDAD, Jonathan James (s3722092) : Some HTML elements needed to be modified to be displayed as a React.js component.

MITTERBACHER, Jonathon Bailey (s3784464) : I was surprised that we were finally able to connect FrontEnd and BackEnd communication allowing us to modify and read from our database.

HOANG, Steven (s3600563) : I was surprised by the excellent communication from our team about any problems we encountered.

KOAY, Wen Shen (s3658845) : Fetching data from a database to display to our front end application.

4. Lessons Learned

GEORGE, Jamaine (s3660962) : I learned that Homy is an excellent resource when I encountered ambiguous errors in my code.

HADDAD, Jonathan James (s3722092) : I learned that AWS can experience errors during app deployment even when a project works locally.

MITTERBACHER, Jonathon Bailey (s3784464) : I learned to effectively use the learning resources available to assist on project development (tutes, teaching staff).

HOANG, Steven (s3600563) : I learned how to establish communication between the Frontend and Backend.

KOAY, Wen Shen (s3658845) : Research and trial and error will often resolve issues that our team was facing.

5. Final Thoughts

Things to Keep : Backend implementation should be kept as it is.

Things to Change : Frontend button styling should be changed to better fit the app's theme.
